

# RAPID PrivLog

What if you could defensibly use Generative AI to increase consistency and mitigate challenges to your privilege log?

## Now you can.

**RAPID PrivLog leverages Generative AI models to do just that! It's the latest enhancement to UnitedLex's AI solutions, built by our data scientists and engineers, to support your litigation needs.**

Privilege logging is considered the most burdensome and time-consuming task a litigant faces during the document production process.<sup>1</sup> Boilerplate privilege descriptions-which are often necessitated by the challenges of reviewing and logging large volumes of documents-often result in "the modern privilege log being as expensive to produce as it is useless."<sup>2</sup>

**Custom-tuned GenAI models, including on-premises BERT and Mistral, generate automated privilege log descriptions.**

- ✓ Short document summaries increase insight into the content to validate privilege decisions
- ✓ Greater consistency and accuracy in descriptions across privileged topics
- ✓ More time for outside counsel to finalize logs and meet deadlines
