New Report

Closing the Data Inventory Gap in Incident Response

Exploring the shift toward proactive incident response and the invaluable savings created through data preparedness.

A cyber incident isn't over when the threat is contained.

The next challenge is often even more complex: determining what data was exposed, identifying who was affected, and making informed decisions under pressure.

Our latest report explores how proactive data preparedness can help organizations reduce risk, accelerate investigations, and respond with greater confidence when every minute matters.

#IndustryExpertise

4iG® - Powered Incident Response

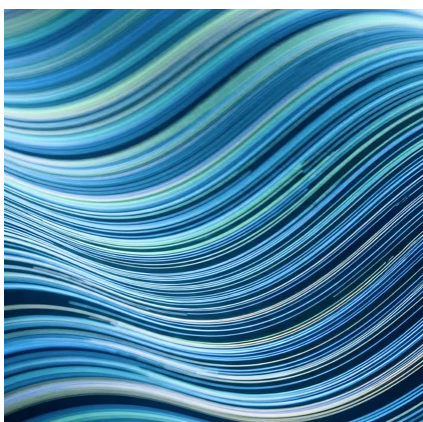

UnitedLex Incident Response Solutions help organizations quickly identify affected individuals, assess compromised data, and meet breach response obligations. Powered by AI, advanced analytics, and 4iG®, our solutions deliver fast, accurate, and scalable responses to complex data incidents.

Our solutions enable teams to:

- Quickly identify affected data subjects and compromised sensitive information
- Accelerate analysis of impacted datasets, including contact information, NPPI, PHI, and other regulated data
- Automate the extraction and validation of critical breach response information
- Develop complete, defensible, mail-ready notification lists through rigorous quality controls
- Reduce review effort while improving speed, accuracy, and scalability for complex matters

Celebrating Our UnitedLex Puppies!

In August, we celebrate **International Dog Day**, a perfect opportunity to share some special moments with our furry companions.

In this edition, we're featuring photos of our colleagues and their beloved puppies, whose loyalty, energy, and unconditional love brighten our days.

Thank you for reading this month's **Data Matters** newsletter. We hope you found it valuable! Please share it with your colleagues and professional network, and visit [our website](#) for more resources and information. We look forward to connecting with you again next month. Comments or feedback? [Contact us](#).
